

Meeting 13

Speaking: Project Presentation

Why Practice Project Presentations?

- Enhance communication of technical ideas
- Demonstrate clarity and confidence
- Useful for class, client meetings, or thesis defense

Presentation Structure

1. Title Slide
2. Problem and Objective
3. Solution or System Design
4. Demo or Screenshot
5. Conclusion and Q&A

Introduction to Technical Communication

Definition:

Technical communication is the process of conveying technical information to different audiences clearly and effectively.

Examples:

- Writing user manuals
- Presenting project features
- Explaining system architecture to clients

Why Technical Communication Matters

- Essential for teamwork and collaboration
- Builds trust with stakeholders
- Increases user adoption and satisfaction
- Helps in pitching ideas, documentation, and support

Know Your Audience

Audience Type

Developers

Clients / Users

Management

Communication Style

Use technical terms and diagrams

Use simple language, real examples

Focus on outcomes and benefits

Techniques to Enhance Clarity

1. **Simplify Language** – Use plain English
2. **Use Analogies** – Compare to real-world examples
3. **Break Down Concepts** – One idea per paragraph or sentence
4. **Use Visuals** – Flowcharts, diagrams, screenshots

Key Phrases for Technical Communication

- *“This system allows users to...”*
- *“Think of it like a digital locker for your files...”*
- *“The backend handles data processing using...”*
- *“In simple terms, this algorithm finds the fastest path...”*

Speaking Practice (Pair Activity)

Instructions:

Explain the following to your partner (non-technical tone):

- What is a database?
- What is cloud computing?
- How does a login system work?
- Switch roles and give feedback on clarity and structure.

Dos and Don'ts

✓ Do:

- Know your audience
- Use examples
- Keep it structured
- Repeat key points if necessary

✗ Don't:

- Use too many acronyms
- Read from slides word-for-word
- Speak too fast

Writing Practice

Task:

Write a short explanation (max 150 words) on one of the following:

- How your mobile app works
- What an API is
- What version control (like Git) is used for

Focus on non-technical audiences (e.g., a client or business user)

Example Opening Statement

- “Good afternoon everyone. Today, I will present my project called ‘Smart Attendance System’. This project aims to simplify class attendance using QR codes. Let me start by explaining the problem it solves...”
