

Meeting 7

Resume

Overview

This session summarizes the key lessons we learned

1. Vocabulary in Information Technology
2. Reading IT articles
3. Writing simple system descriptions
4. Email and business communication
5. Listening to tech presentations
6. Information system project analysis

IT Vocabulary Essentials

We learned basic and technical vocabulary such as:

1. Hardware – physical parts of a computer
2. Software – programs and applications
3. Database – structured data storage
4. Network – system of connected devices
5. User interface, Cloud, Algorithm, Encryption

Reading IT Articles

We practiced reading comprehension using real IT-related texts

1. Understanding technical terms in context
2. Identifying main ideas & supporting details
3. Skimming & scanning techniques

Writing System Descriptions

We wrote a short description of an application/system:

1. System name and purpose
2. Main features
3. Users and benefits

Business Email & Communication

We learned the structure of a formal email:

1. Subject lineGreeting
2. Body (brief and clear)
3. Closing and signature

Analyzing an IS Project

We analyzed a real-world Information System project:

1. Purpose of the system
2. System components (UI, DB, backend)
3. Stakeholders and their roles
4. Tools and technologies used
